DETAILED ACTION

1. Receipt is acknowledged of the amendment filed 8/14/02 in which claims 1-8 were amended and claims 9-30 were added.

Claim Objections

2. Claims 8 and 26 are objected to because of the following informalities: lines and "ATM-type" should be changed to --ATM--. Appropriate correction is required.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crevelt et al, US patent No. 5,902,983, in view of Von Kohorn, US Patent No. 5,916,024.

Crevelt et al disclose a preset amount electronic funds transfer system for gaming machines comprising: associating a point of sale device (card reader having slot therein) with the entertainment device 28, 30, 32; placing the entertainment machine and the POS in communication with an active layer 54; placing the active layer in communication to a host processor 56; placing the host processor a financial institution (see col.7, line 65 to col. 8, line 6); requesting electronic funds via the point of sale device (see col. 9, line 20-23); forwarding the request to the active layer (see col. 8, lines 42-61); profiling the request for either approving or disapproving the request (see col. 6, line 33+); and providing electronic funds to the user if the request is approved. Regarding how the fund is collected the approval of the fund falls within the

Art Unit: 2876

engineering design choice failing to provide any unexpected results, which there, obvious. (see figures 1 and 2; col. 9, line 1+).

Crevelt et al disclose that an attendant could set to adjust the preset limit in response to some preset condition, but fail to disclose or fairly suggest that the request is profiling by the active layer.

Von Kohorn disclose a system and method of playing games and rewarding successful players comprising: a data facility 904 to communicate to central telephone facility 702 to set different credit limits so that a data storage device 940 is provided with credit limit data so that any wager exceeding the credit limit is rejected by the data facility 904 (see col. 97, line 55+).

In view of Von Kohorn's teachings, it would have been obvious for a person of ordinary skill in the art at the time the invention was made to include well known credit limit information into the users' preset conditions of the system of Crevelt et al as a means for regulating users' gambling habit. Such modification would make the system more controllable, more attractive to the general public, and more practical by allowing the customers to set up their credit limit so that the active layer could automatically prevent the users from exceeding their budget plan. Therefore, it would have been an obvious extension as taught by Crevelt et al.

Response to Arguments

5. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection.
